INCOTEC TECHNOLOGIES UPGRADING

Benefits of Incotec's upgrading include

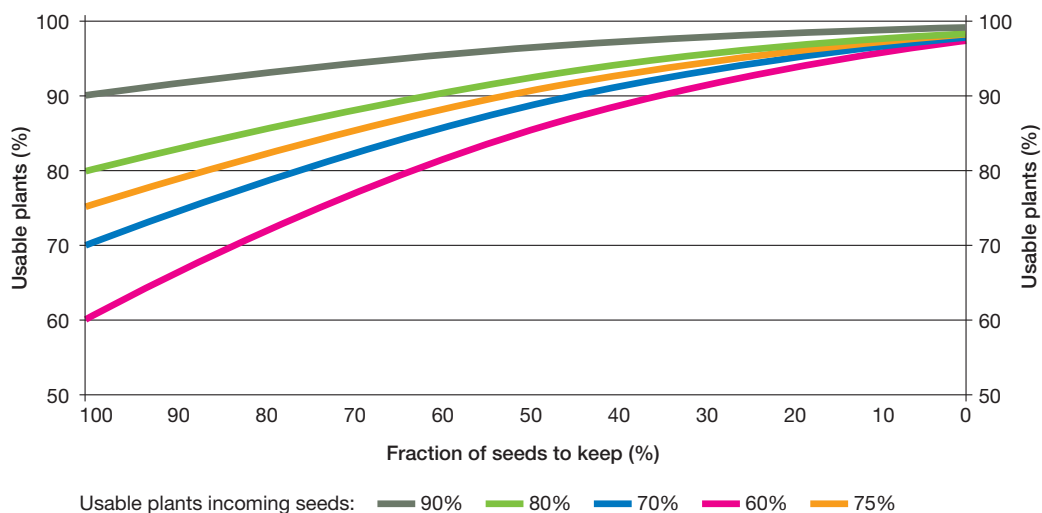

- Highest possible yield
- Increased percentage of usable transplants
- Service tailored to your needs
- Compatible with all Incotec technologies

How can you get the highest percentage of usable transplants out of each seed lot? Incotec specialises in getting the utmost out of seed. We know all about seeds and understand their physiology. We offer a range of mechanical sorting methods and specialised techniques like X-ray upgrading or liquid density separation.

X-RAY UPGRADING

We can even look inside the seed, at its embryo to evaluate the quality. X-ray technology is the smart approach when you need a significant increase in the number of usable seeds. It is the most effective seed upgrading to date and is tailored to tomato, rootstock tomato and pepper seeds. With the latest innovations in this technology we can offer an express delivery time for X-ray upgrading for tomato seeds.

X-ray technology tomato*

*Results are dependent on the quality of the seed lot and may vary accordingly.

The results show the increase in % usable plants in relation to upgraded seed fraction sizes. Improvements in the technology and process are based on the huge amount of data in our tomato database.

PRODUCT OVERVIEW

VEGETABLES EU

Crop	Product	Upgrading	Priming	Seed Hygiene	Encrusting & Pelleting	May be used in Dutch organic farming
ASPARAGUS	Improver	●
